Generator Sizes and Example of What Each Can Power

The chart below is meant to give you a general idea of the amount of power each level of generator can provide.

If you will need to rely on generator power on a regular basis for some or all of your office and/or residential needs - that is, if you will need anything in the second group of generators listed below - you should call professionals to assist you with generator sizing. Those companies who bid on providing the generator should include sizing as part of their bid.

Actual prices will vary on generator brand, import taxes, and local supply and demand. But these figures give you some idea of the price of one size versus another.

	Rated Watts	Can Power	Approximate Cost
Portable: Something y	ou bring with yo	ou to run a few appliances for a short time.	
Small lightweight	2.5 KW	2 to 4 lights,	\$300 - \$500
portable generators.		Small printer,	
		Charge 2-3 laptops,	
Usually petrol (gasoline)		Charge phones	
driven.	5 KW	All of above plus fans	\$ 400 - \$700
Can run for maximum of		7 iii or abore plas rans	φ 100 φ/00
6 to 8 consecutive hours			
o to o consecutive nours
